Included in PC Matic Pro & MSP, RDP Lifeline introduces innovative whitelist based RDP security, realtime alerting, expansive audit logs, remote RDP scheduling and control, and anti-tampering protections for SuperShield, all inside your single cloud based management console.

Eliminate RDP Security Threats

Whitelist Security

RDP Lifeline secures all devices on your network by enforcing a default-deny approach on each RDP session. You control a whitelist of devices that are allowed to initiate a connection to a device on your network while all other attempts are blocked.

Realtime Alerts

Out at your local coffee shop to grab a quick pick me up? No need to worry, RDP Lifeline sends realtime alerts to SMS or Email with quick links to kill an active session, whitelist a new device, disable RDP, or shutdown that device until you return to the office.

Expansive Reporting

Retain detailed logging on attempted and successful RDP sessions in your environment. You can easily track how often sessions have happened, what location and device they initiated from, duration, and IP Address to help maintain compliance in your network.
