## Superior Endpoint Security & Global Application Allow List Technology

PC Matic Pro takes a fundamentally different approach to endpoint security with our exclusive Automated Global Application Allow List technology. Only 'trusted' applications are allowed to run on the endpoint providing a significantly better security solution than traditional products.

If an application is not on the Allow List, PC Matic Pro blocks it, and the proprietary automation technology uploads the sample for immediate analysis and classification by our malware professionals. This automated process of analysis and classification keeps the whitelist updated in real time without user intervention.

Setup and manage thousands of devices centrally from a single pane of glass and deliver the right security to the right people in real time.

## Endpoint Security Software

- ✓ Automated Global Allow List Technology
- ✓ Industry Leading Ransomware Prevention
- ✓ Fileless Malware Protection
- ✓ RDP Security Suite
- ✓ Cloud Based Management Console
- ✓ Remote Management Suite
- ✓ Third Party Patch Management
- ✓ Detailed Alerting and Reporting
- ✓ Online Scam Protection
- ✓ Protects Windows, Mac, and Servers
- ✓ Made in the USA

## Awards & Recognition

# The Best Security | The Industry's Only Automated Allow List

The entire security industry is based on a deny list architecture, a futile attempt to record every piece of malware. In a world of polymorphic viruses, this architecture has proved impotent, and detection rates have plummeted leaving customers frustrated and confused.

Introduced in January 2011, PC Matic Pro's SuperShield remains the only automated application allow list that strictly allows trusted applications to run and prevents polymorphic viruses, ransomware, and advanced persistent threats. We have continued to prove it in third-party testing with 100% detection rates. Most recently with AV-Test in June of 2020.

With today's ransomware a business can lose the files most critical to its operation in an instant. Anti-virus has never been more important. PC Matic Pro is the only solution that prevents even the newest ransomware from encrypting.

## Made In America

When it comes to safeguarding valuable data, knowing where your security comes from is vital. Other security companies outsource research and development to India, Russia and the Philippines.

## We Do Not Believe In Outsourcing

## AV-TEST Malware Protection June 2020

PC Matic was among the leaders in this test with a 100% protection score and no malware samples missed.

### PC Matic Benefits :

- ✓ Fast Deployment
- ✓ Simple Management
- ✓ Affordable Solution
- ✓ Reliable Security

PC Matic, Inc. was founded in 1999 and has developed a comprehensive suite that covers all aspects of endpoint security and remote monitoring and management. The PC Matic Pro Endpoint Suite combines granular management abilities with remote administration and control into a cloud based console. Consolidating critical features of RDP Security, Integrated VNC, Remote CMD Prompt, Patch Management, and more with our unbeatable security ensures a comprehensive experience for IT Administrators that doesn't break the bank.
